

CHANGING THE SYSTEM

Carefully choosing what we buy and how we buy it is not going to stop plastic pollution in the long term. The problem is too big and complex to be solved by individual choices alone. Companies also need to do their part - not by greenwashing, but by updating the way they design, produce and deliver their products and services. They also need to take responsibility for any harm they cause.

If companies did that, then what we buy and how we buy it would change for everyone. *Everyone* would use less plastic, not just us. To get this to happen, we need to change the system. To find out more about what this means, how we can do it and what it would look like, check out the links below.

Do

Systems can be both large and small. They define how we do things like shopping, eating or getting around.

Can you think of any system changes that could help to reduce plastic in any of these areas where you live?

Reflect

Companies have the power to make big system changes. Individuals only have the power to change their own lifestyle. Do you agree?

💡 *Do companies listen to individuals? How does this affect your answer?*
